

QObject

```
classDiagram
    class QObject
    class MyTcpSocket {
        +MyTcpSocket()
        +doConnect()
        +~MyTcpSocket()
        +connected()
        +disconnected()
        +bytesWritten()
        +readyRead()
        +Error()
        +reconnect()
    }
    QObject <|-- MyTcpSocket
```

The diagram illustrates a class hierarchy where MyTcpSocket inherits from QObject. The QObject class is shown at the top with an empty body. MyTcpSocket is shown below it, inheriting from QObject as indicated by a blue arrow with an open triangle head. MyTcpSocket has a list of public methods: MyTcpSocket(), doConnect(), ~MyTcpSocket(), connected(), disconnected(), bytesWritten(), readyRead(), Error(), and reconnect().

MyTcpSocket

- + MyTcpSocket()
- + doConnect()
- + ~MyTcpSocket()
- + connected()
- + disconnected()
- + bytesWritten()
- + readyRead()
- + Error()
- + reconnect()
